

Assignment 2

1. Grade Checker

Take a score as input and print the grade based on the following:

90+ : "A"

80-89 : "B"

70-79 : "C"

60-69 : "D"

Below 60 : "F"

here we used a basic if else statement to carry out marks and all.

```
if_statement.py > ...
34
35
36 marks = int(input("ENTER YOUR MARKS! \n "))
37 if marks >= 90:
38 |     grade = "A"
39 elif marks >= 80:
40 |     grade = "B"
41 elif marks >= 70:
42 |     grade = "C"
43 elif marks >= 60:
44 |     grade = "D"
45 else:
46 |     grade = "F"
47 print ("Your Grade is - ", grade)
```

PROBLEMS	OUTPUT	DEBUG CONSOLE	TERMINAL	PORTS

```

2 Student Grades

Create a dictionary where the keys are student names and the values are their grades. Allow the user to:

Add a new student and grade.

Update an existing student's grade.

Print all student grades.

Used dictionary and basic operations. Using if else:

```
basic_object.py > ...
49 # Student_grade TASK 2
50 # Create a dictionary where the keys are student names and the values are their grades. Allow the user to:
51 # Add a new student and grade.
52 # Update an existing student's grade.
53 # Print all student grades
54
55 student_grades = {} # create a empty dictinonary
56
57
58 # Add a new student
59 name = input("ENTER YOUR NAME: ")
60 grade = input("ENTER YOUR GRADE: ")
61 student_grades[name] = grade
62
63
64 # Update an existing student's grade.
65 name = input("Enter student name to update: ")
66 if name in student_grades:
67     grade = input("Enter new grade: ")
68     student_grades [name] = grade
69 else:
70     print("Student not found!")
71
72 # Print all student grades
73 print("\nStudent Grades:")
74 for name, grade in student_grades.items():
75     print(name, ":", grade)
76
77
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

```
(.venv) PS C:\Users\Kunal Sandeep Jadhav\OneDrive\Desktop\DevOps\Python> python3 basic_object.py
ENTER YOUR NAME: Kunal
ENTER YOUR GRADE: F
Enter student name to update: Kunal
Enter new grade: A
Student Grades:
Kunal : A

```

3. Write to a File

Write a program to create a text file and write some content to it.

Using file functions like write and open.

```
file_handling.py x my_text_file.txt function_testing.py my_text_file.txt x
file_handling.py > ...
18 file = open('my_text_file.txt', 'w')
19
20 file.write("Hello my is kunal jadhav. \n")
21 file.write("My name is kunal jadhav I'm in EXTC. \n")
22 file.write("I love this course ")
23
24 file.close()
25
26 print("this is 'my_text_file.txt' file")

my_text_file.txt
1 Hello my is kunal jadhav.
2 My name is kunal jadhav I'm in EXTC.
3 I love this course

4. Read from a File

We used open in read mode and file.read to read and print to display.

```
file_handling.py > ...
27
28
29 # 4. Read from a File TASK 4
30 # We used open in read mode and file.read to read and print to display.
31
32 file = open("data.txt", "r")
33 data = file.read()
34 print(data)
35
36
37
38
39
40
41
